Leonardo Rocha

Senior Data Engineer @ Itaú | Building Scalable Data Products on AWS | Big Data | Data Governance | FinOps | Python | Spark | SQL
Barueri, São Paulo, Brazil

Summary

Senior Data Engineer with 5+ years of experience designing and scaling data products, analytics solutions, and cloud-based data platforms at Itaú Unibanco, the largest financial institution in Latin America. Throughout my career, I have helped product, analytics, and business teams transform raw data into reliable, governed, and actionable insights through scalable data pipelines, cloud-native architectures, and data-driven solutions. My experience spans Data Engineering, Analytics Engineering, Data Governance, FinOps, and AWS Analytics, with a strong focus on building cost-efficient and high-quality data ecosystems that support strategic decision-making. Currently, I am particularly interested in how Artificial Intelligence can simplify access to data and business indicators for non-technical users while maintaining strong standards for governance, reliability, and data quality. I hold a Bachelor's degree in Computer Science at the University Mackenzie, an MBA in Data Science & Artificial Intelligence at the FIAP, and I am currently pursuing a specialization in Data Engineering at the University of São Paulo. Areas of expertise:→ Analytics Engineering→ Artificial Intelligence→ Data Architecture→ Data Engineering→ Data Governance→ Data Quality→ FinOps Technologies:→ AWS→ Python→ PySpark→ Spark→ SparkSQL→ SQL→ Terraform Certifications:→ AWS Certified Solutions Architect - Associate→ AWS Certified Artificial Intelligence - Practitioner→ AWS Certified Cloud - Practitioner

Experience

Itaú Unibanco

5 years 7 months

Senior Data Engineer - Insurance

March 2026 - Present (5 months)

São Paulo, São Paulo, Brasil

Senior Analytics Engineer - Cards

March 2025 - February 2026 (1 year)

São Paulo, São Paulo, Brazil

What were the day-to-day activities?

Creation and continuous improvement of reports that centralize the main indicators of Customer Acquisition, Profitability, and Satisfaction.

Development and dissemination of best practices in the use of AWS Athena, Glue, and QuickSight services, aiming to maximize the efficiency of partner squads.

Enhancement of the data governance and quality agenda through periodic meetings with other teams in the community.

What was the most relevant project developed during the period?

With the spread of a data-driven culture within the community, product squads began using AWS Athena more frequently, which resulted in a significant increase in the service cost in our consumer account.

In response, I developed a script in AWS Glue capable of identifying and classifying the cost of queries executed in AWS Athena into six levels: critical, very high, high, medium, low, and very low — which provided a detailed view of our routines and critical processes.

Furthermore, by monitoring the indicators through AWS QuickSight, we identified opportunities to deliver personalized training sessions for the squads, adapting the content level according to each team's maturity. This resulted in improvements in our cost and data governance indicators.

Mid Level Analytics Engineer - Cards

March 2024 - February 2025 (1 year)

São Paulo, São Paulo, Brazil

Key Project:

→ Designed and implemented an end-to-end data product processing over 500M daily events from Itaú Unibanco's Cards mobile app. Built data pipelines to transform raw navigation data into customer behavior metrics and centralized insights through a fully automated dashboard covering more than 15 customer journeys. The solution enabled business, product, and design

teams to identify friction points, monitor customer behavior, and uncover optimization opportunities that supported conversion improvements across digital products.

Additional Contributions:

- Led AWS analytics training sessions for product analysts, promoting cloud data best practices, reducing Athena consumption costs, and achieving an NPS score above 80%.
- Partnered with business and technology teams to translate business requirements into scalable data products, including datasets, dashboards, and machine learning solutions.
- Redesigned the statement payments analytics dashboard, improving visibility into amortization and delinquency indicators and enabling more informed product and business decisions.

Entry Level Analytics Engineer - Cards

July 2022 - February 2024 (1 year 8 months)

São Paulo, São Paulo, Brazil

Key Project:

- Designed an internal web application to standardize project documentation across Analytics Engineering, Data Engineering, Data Science, and Machine Learning teams. The solution automated documentation generation through governance-approved templates and predefined standards, reducing documentation effort by 30% and increasing documentation coverage to 95%. As a result, it improved project maintainability, accelerated onboarding processes, strengthened knowledge sharing, reduced documentation inconsistencies, and increased compliance with governance requirements across the department.

Additional Contributions:

- Conducted data discovery and quality assessments for Data Mesh adoption, improving data reliability and accessibility.
- Developed a centralized KPI dashboard, enabling stakeholders to focus on insights rather than manual reporting.
- Migrated dozens of SQL workloads from Sybase ASE to Presto, accelerating AWS adoption and optimizing costs.

Data Analyst Intern - Insurance

January 2021 - June 2022 (1 year 6 months)

São Paulo, São Paulo, Brazil

Key Project:

→ Designed and implemented an end-to-end automated data pipeline to analyze customer retention and contract cancellation behavior across multiple insurance products. The solution processed over 100K insurance contracts daily from multiple sources, applying data quality controls, business rules, and transformation logic to generate retention KPIs and lifecycle metrics. Insights were delivered through a dashboard refreshed daily, enabling business stakeholders to identify cancellation patterns, validate hypotheses, and support data-driven decision-making.

Additional Contributions:

- Developed automated data quality controls that improved pipeline reliability, consistency, and operational monitoring.
- Conducted exploratory data analyses to support business stakeholders in identifying trends and opportunities.
- Produced technical documentation and business rule specifications, ensuring long-term project maintainability and knowledge sharing.

Education

Escola Politécnica da USP

Specialization, Data Engineering and Big Data · (February 2026 - February 2028)

FIAP

Specialization, Data Science & Artificial Intelligence · (April 2024 - April 2025)

Mackenzie Presbyterian University

Bachelor's Degree, Computer Science · (January 2020 - December 2023)

Barueri Technological Institute

Computer Technician, Programming · (January 2017 - December 2019)

Wizard by Pearson

English · (January 2017 - December 2021)
